New Video & Camera Solutions from Power & Tel Enterprise

We've partnered with Optelecom-NKF to offer you a comprehensive line of surveillance products, access to technical support and training and competitively priced products.

Optelecom-NKF is a global supplier of complete surveillance solutions for traffic management and security of airports, seaports, casinos, prisons, utilities, public transport, city centers, hospitals and corporate campuses. This includes IP cameras, video servers/codecs, network video recorders, fiber transmission equipment, video management software and video analytics.

In addition to its comprehensive product line, Optelecom-NKF has more than 35 years of experience providing technical advice and support to the security industry, and developing and testing fiber optic transmission and IP surveillance products. As a support organization, Optelecom-NKF provides its customers with design, commissioning and training opportunities.

Public Transit

Protecting the public from terrorist threats and other illegal activities has become a dominant and immediate requirement for the organizations managing public transit stations and infrastructure. Many agencies and groups are looking for ways to view live and recorded video surveillance to deter dangerous behavior and provide evidence to prosecute any offenders.

Industrial & Commercial Security

The threat of terrorism, increasing violence and illegal activities, and the growing acceptance of video surveillance in public places have created a rapidly growing demand for efficient and effective video surveillance solutions.

Traffic Monitoring

Incident management, traffic flow control, and intelligent video surveillance requirements are driving traffic agencies around the world to build integrated video and data networks.

Government

Threat detection, heightened security requirements and the trend toward a more mobile military with comprehensive situational awareness are driving a need for video network applications. These applications include perimeter security, enhanced-capability combat operations, temporary field deployment, training and air traffic control.

Contact us for Optelecom-NKF's full-line **Surveillance Solutions & Video over Fiber** catalogs

Sigura® Surveillance

Using a modular approach that can be tailored to the requirements of any video application, the Sigura line provides all the components necessary to quickly move your application from single location control to multiple location access.

Cameras

IP and analog cameras including value priced fixed dome cameras, PTZ dome cameras and boxed cameras for both indoor and outdoor applications.

Video Codecs

Video codecs ranging from cost-effective, low-bandwidth unit to high-grade, field-hardened, multichannel scalable versions

Recording Solutions

The Sigura recording solutions suite includes the i-NVR series offering intelligent network video storage for both small CCTV applications as well as enterprise-level systems demanding scalable and redundant storage.

Network Switching Equipment

Gigabit Ethernet switches, fast Ethernet switches and edge switches with built-in video encoders all provide exceptional performance under industrial conditions, characterized by a wide temperature range and mechanical stress.

Software

A broad range of video management software, from simpler, entry level requirements to more complex, enterprise level networks. A development kit also is available for integration with third-party software.

Video over Fiber

Optelecom-NKF's reputation for high-quality, reliable products has been built through more than 35 years of experience in the fiber optic transmission market. Whether moving video, audio, data or a combination of the three, the wide range of Optelecom-NKF fiber products makes it possible to meet any interface, topological or temperature requirement.

MC Series

The MC series is specifically designed for safety, security, and transportation applications. With its compact design and carefully selected combinations of video, data and audio channels, the MC series offers a full range of simple to install, cost-effective point-to-point fiber optic video surveillance solutions.

- Analog control options
- Stand-alone or chassis mount models

9000 Series

The 9000 series is specifically tailored to support government and transportation applications and is ideal when modifications or upgrades are sought for existing systems. With its modular design and ability to utilize CWDM drop and insert technology, the 9000 series offers maximum flexibility and scalability by combining any number of video, data and audio channels.

In addition, all 9000 series system modules are supported by a remote network management capability (9900-NMS), which offers users the ability to remotely manage optical wavelengths and overall system performance.
